VILLAGE RESIDENCE

MAY 2019, LEBANON

RENDERED IMAGE #1

The Village Residence is an 850 m^2 in Btekhney, Mount Lebanon. A 7 bedroom villa, was designed to be integrated within a steep slope with a difference of 20m, which was a great challenge.

Working with GHAS-co engineering consultancy, my roles included: conceptual design, plans, & rendered images.

Chbeniyeh Apartments

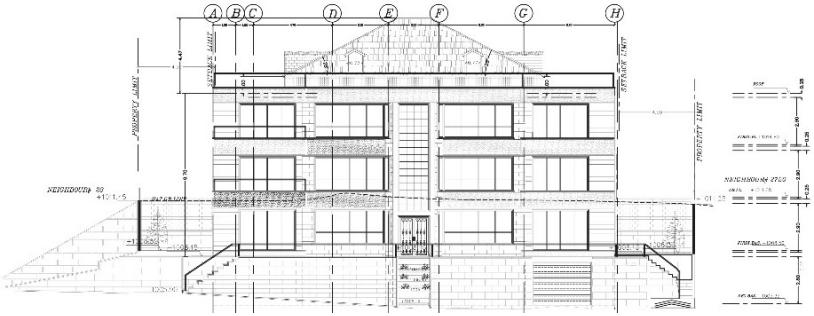

JUNE 2019, UAE

RENDERED IMAGE #1

Elevation 1

Elevation 2

The project is located in Chbanieh, Mount Lebanon.

Shop drawings are done on AutoCAD 2d 2018. The massing is done on rhinoceros , Then Rendered using 3d max and V-ray, & finally worked on Photoshop to add greenery and human figures.

Btekhney HILLS VILLA

JUNE 2019, UAE

Sections showing the steep slope. This was a great challenge in the project where high garden walls were not to be accepted.

The renderings have a cartoonish collage like character that was decided by the client.

ADAPTIVE REUSE – SAWFAR'S GRAND HOTEL

FEBRUARY 2018

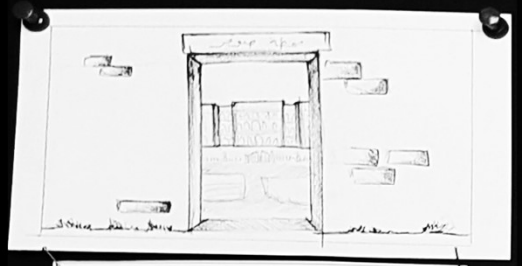

Sawfar Grand Hotel that was one a destination for the wealthy Arabs in now a living phantom.

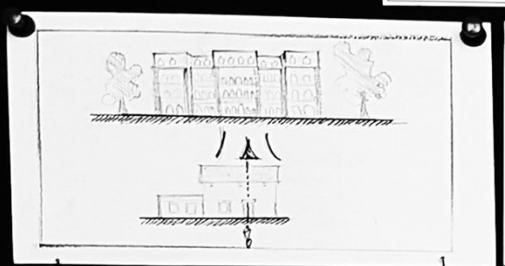

The Proposal is to insert into it a filmmaking practice facility. My project is to turn the visitor into a performer, offered a script, he can decide to follow or not…

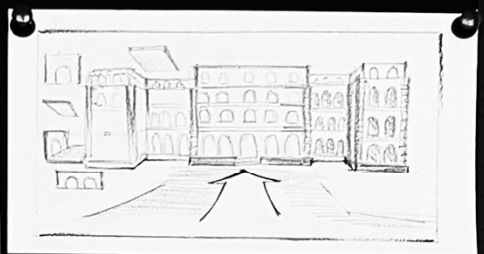

Story board

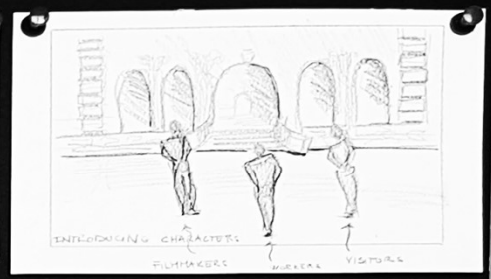

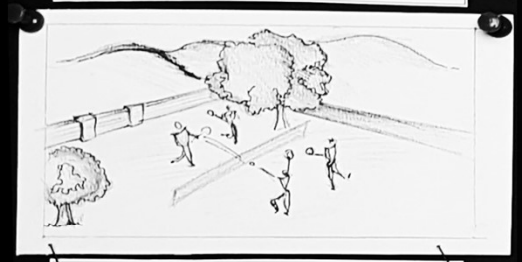

Starting from the same point: visitors used to perceive the hotel

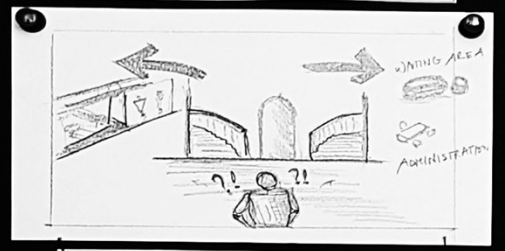

Axis relating train station to hotel

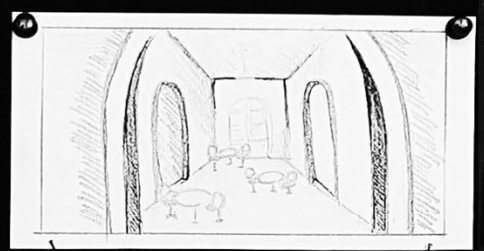

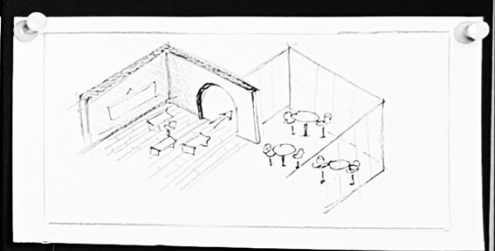

Re- creating open space to introduce the different characters to each other

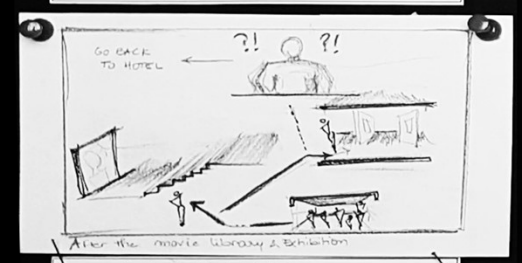

Lobby - 1st dispersing point: choosing to discover filmmaking or not

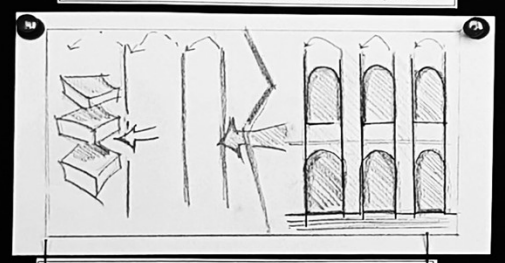

Scenario 1: the hotel is the background ex: [illegible]

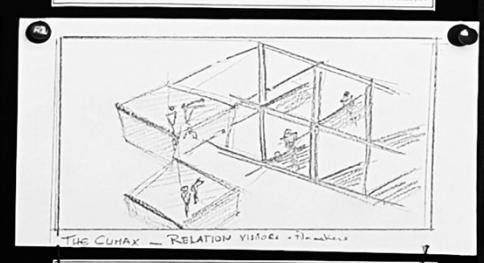

Introducing the film industry to: filmmakers (workshops)

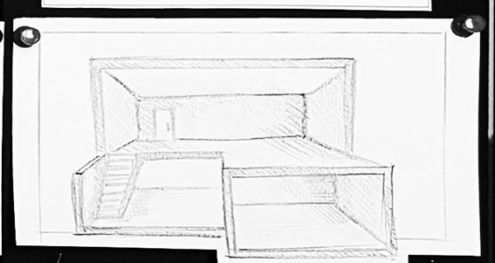

Introducing the film industry to: Public (movie theatre, exhibition)

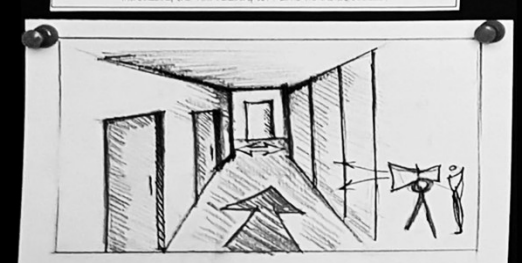

Continuing the story of the hotel's elevation

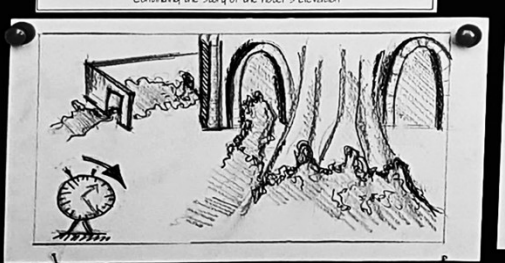

to reach the climax: the relation between non- professional actors & filmmakers

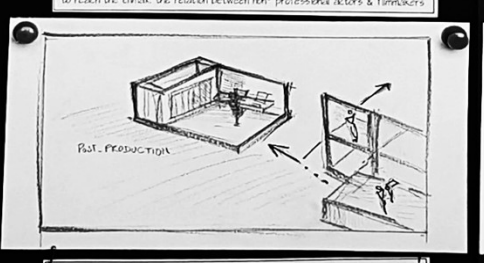

Creating diversity of studio options

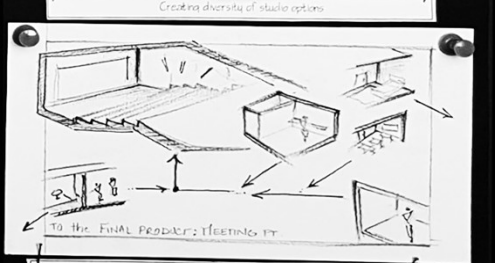

what if time travel way forward..

Ways resolving the climax: editing & post- production

The resolution to the problem: Auditorium - meeting pt. of all characters
